Main.java

Run

```java
class Box {
    int w, h;

    // Default constructor
    Box() {
        w = 1;
        h = 1;
    }

    // Parameterized constructor
    Box(int w, int h) {
        this.w = w;
        this.h = h;
    }

    // Copy constructor
    Box(Box b) {
        this.w = b.w;
        this.h = b.h;
    }

    int area() {
        return w * h;
    }
}

public class Main {
    public static void main(String[] args) {

        Box a = new Box(4, 3);
        Box b = new Box(a);
        Box c = new Box();

        System.out.println("Area of a: " + a.area());
        System.out.println("Area of b: " + b.area());
        System.out.println("Area of c: " + c.area());
    }
}
```

Output

```
Area of a: 12
Area of b: 12
Area of c: 1
