

```
1 class Student {  
2  
3     // Data members  
4     String studentName;  
5     int studentAge;  
6  
7     // Method  
8     void display() {  
9         System.out.println("Student Name: " + studentName);  
10        System.out.println("Student Age: " + studentAge);  
11    }  
12  
13    public static void main(String[] args) {  
14  
15        // Creating object  
16        Student s = new Student();  
17  
18        // Assigning values  
19        s.studentName = "george";  
20        s.studentAge = 20;  
21  
22        // Calling method  
23        s.display();  
24    }  
25 }
```

Student Name: george  
Student Age: 20
